

RealEstateRevolution

Our **SMART CONTRACT** simplifies the end-to-end process of real estate transactions. Government agencies choose to deploy our smart contract because:

No more long lines at government agencies to sell/register property

Transactions are recorded on the blockchain.

Sends Ether to property seller's wallet instantly when token sale is complete

Property owner owns deed

Courthouse deploys smart contract to tokenize deed and transfer token to owner

Owner decides to sell and gets offers from buyers all through our UI

Buyer pays initial deposit within 3 days and initiates inspection

Buyer pays in full and deed is transferred to buyer

Buyer's proof of funds in wallet are confirmed

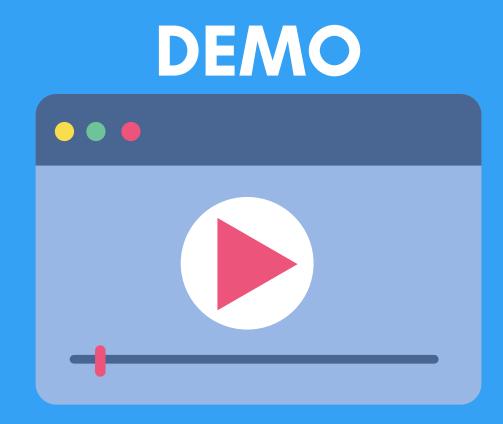

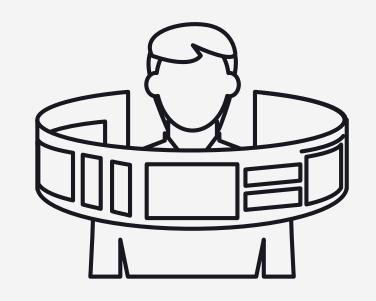

Buyer's deposit is refunded

But really... how does it work?

Future Developments What should you expect?

Adding bidding functionality on properties

Adding functionality for closing costs

Improving our legal framework

Transacting with a stable coin

Mortgage agreements

Enable Multiple signature transactions

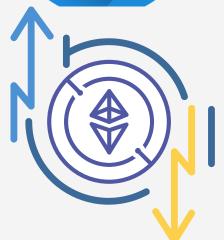

Challenges

Trying to keep our process decentralized without the involvement of government agencies.

Smart contract interacting with Ul

Transacting with stable currency. Ethereum is currently too volatile to use as the default
